

Crawl selection

Select annual crawls

one frozen snapshot per year

Sample WET files

fixed trend sample; corpus batches

Acquire plaintext

compact WET records for broad scanning

Candidate discovery

Find term candidates

target and baseline matches

Screen obvious noise

boilerplate, listings, weak pages, domain caps

Export candidate URLs

unique crawl-URL rows for validation

Archived-page validation

Locate archived pages

resolve WARC file, offset, and length

Fetch archived HTML

byte-range retrieval from WARC files

Extract and re-check text

main content, dates, surviving term hits

Final filtering

Apply quality filters

substantive text and web-corpus heuristics

Keep English and deduplicate

language filter and near-duplicate removal

Analysis outputs

Trend product

yearly denominators and validated rates

Corpus product

quality-gated target-term documents for downstream NLP
