

Crawl selection

Select annual crawls

one frozen snapshot per year

Sample WET files

fixed per-year batches

Acquire plaintext

compact WET records for broad scanning

Candidate discovery

Find term candidates

target and comparator matches

Screen obvious noise

boilerplate, listings, weak pages, domain caps

Export candidate URLs

unique crawl-URL rows for validation

Archived-page validation

Locate archived pages

resolve WARC file, offset, and length

Fetch archived HTML

byte-range retrieval from WARC files

Extract and re-check text

main content, dates, surviving term hits

Final filtering

Apply quality filters

substantive text and web-corpus heuristics

Keep English and deduplicate

language filter and near-duplicate removal

Output

Analysis corpus

quality-gated target- and comparator-term documents
