

WET acquisition

Frozen crawl map
one Common Crawl
crawl per year

**Deterministic
WET sampling**
trend fixed sample; corpus
initial/expansion batches

Download WET files
retry/backoff, disk preflight,
cleanup after success

Candidate discovery

Scan WET text
target, baseline, and
context patterns

Coarse WET triage
min length, boiler-
plate signatures, URL
denylist, domain cap

Candidate URL export
unique crawl-URL
rows uploaded to S3

WARC validation and enrichment

**Resolve WARC
pointers**
local Common
Crawl index server

Fetch WARC HTML
byte ranges with
retry, cooldown, and
abort safeguards

Extract main text
Trafilatura extrac-
tion, publication-date
recovery, hit revalidation

Quality gate

Document-quality gate
substantive text,
DataTrove/FineWeb-
style filters

**English filter
and near-dedup**
local deduplication
before final outputs

Final products

Trend product
yearly denominators
and validated rates

Corpus product
quality-gated target-
term documents for
downstream NLP
